

# QA Challenge for Senior QA Automation Engineer (f/m/d) position

---

## Deliverables

---

- The project will run on a Mac OS machine
- There should be a README file describing:
  - Description of the project and frameworks used
  - Necessary steps for running the project
  - Necessary steps for running the tests in parallel
- The project should not contain any IDE specific files

Url: [www.fromatob.com](http://www.fromatob.com)

---

**Feature1:** As fromatob, I want to be sure that our customers cannot login with non-existing credentials.

Feel free to create 1-2 tests for this feature.

**Feature2:** As a user, I want to be able to select the shortest (duration) connection from Deutsche Bahn for my trip.

Go on our homepage and search for a trip between 2 cities of your choice (inside Germany). Select a date which is 14 days from the time of running the tests. Select the fastest offer from Deutsche Bahn (DB) and make sure you land to the Overview Page

## Bonus points for:

---

- Taking Screenshot on a failed test.
- Ability to run tests for different browsers/OS;
- Ability to run tests for different environments(URLs).

## Evaluation Criteria

---

- Feel free to be creative but keeping the focus on results
- The code should be documented, readable and working on all platforms
